

Glitter Through the Season and Beyond

Photos by Jane Russell

Beautiful home décor is all about balance: light to dark, hard to soft, absorbent to reflective. Reflective surfaces can add light and space to any room. At Christmas consider touches of metallic with no Christmas detailing, in silver or brass - yes, it's coming back!

Start in the kitchen, where reflective hardware on the cabinets adds a touch of glint, or a high-gloss ceramic or stainless steel colander on the island catches your eye and the light, when you enter the room. Also touches of whimsy can be added with kitchen accessories.

During the holiday season, many of the reflective surfaces you choose for your home can be used to carry our décor through the dark days of winter. By removing the garlands and the decorated tree you still can have a reflective, bright room that will brighten your space throughout the winter.
